VIVEK RAJ

PROFILE SUMMARY

- **Cloud & Platform Engineering Leader** with 8+ years of experience architecting and scaling resilient technology ecosystems across e-commerce, digital payments, and telecom, combining strategic vision with deep hands-on engineering expertise.
- **Proven automation innovator** who has engineered AI/AIOps capabilities, MCP-based infrastructure platforms, intelligent workflow orchestration, and AI agents to eliminate operational toil, accelerate incident resolution, and enable self-service engineering.
- **Reliability and modernization specialist** with a strong record of architecting Kubernetes platforms, GitOps delivery models, progressive deployment frameworks, observability ecosystems, and multi-cloud infrastructure supporting large-scale production environments.
- **Business-impact driven technologist** recognized with multiple enterprise awards for cloud migration, infrastructure automation, platform modernization, and AI innovation, consistently translating complex engineering challenges into measurable gains in reliability, productivity, scalability, and cost efficiency.

CORE COMPETENCIES

- **Cloud Platform Architecture**
- **Platform Engineering**
- **DevOps Transformation**
- **Site Reliability Engineering**
- **Kubernetes Platform Management**
- **Infrastructure as Code**
- **GitOps & Continuous Delivery**
- **Observability & Reliability Engineering**
- **AI/AIOps Automation**

SOFT SKILLS

EDUCATION DETAIL

Bachelor of Technology (B.Tech)
Greater Noida Institute of Technology, Greater Noida, India
Aug 2017

AWARDS & RECOGNITION

- **Modernizing AI – Simultaneously, at Scale Award | Sprinklr | 2026**
- **Public Endpoint-Monitoring Platform Award | Sprinklr | 2025** — Recognition for building a platform tracking availability and health of **5,000+ public URLs/endpoints**.
- **Rockstar Award | Paytm | 2024** — PG2 infrastructure automation and monitoring setup.
- **Paytm Payment Infinity Award | Paytm | 2023** — Outstanding contribution to building Paytm Payment Infinity.
- **Rockstar Award | Paytm | 2022** — PG2 migration from Ali Cloud to AWS with end-to-end CI/CD and monitoring, delivering **40% reduction in server downtime**.
- **Award | Airtel | 2021** — JVM hygiene automation across multiple microservices.
- **Thank You Award | PayU | 2019** — Exceptional contribution during Big Billion Day.

TECHNICAL SKILLS

- **AI & AIOps:** MCP (Model Context Protocol), AI agents (LangGraph, Agno), RAG, LLM-assisted automation, AI-powered anomaly detection, prompt engineering, OpenAI-compatible LLM APIs, LiteLLM, Claude & Cursor integration
- **Cloud:** AWS (EKS, ECS, ECR, EC2, Lambda, VPC, S3, Route53, ACM, Cost Explorer, OpenSearch, QuickSight), GCP (GKE, GCR, VPC, IAM, Cloud Monitoring/Logging, Apigee), Azure (AKS, Compute, VNet, NSG, ACR, Storage, IAM)
- **Containers & Orchestration:** Docker, Kubernetes, Docker Compose, Amazon ECS, GKE, KEDA, Argo Workflows, Airflow, Litmus Chaos
- **IaC & Configuration:** Terraform, Terragrunt, Ansible
- **CI/CD & Version Control:** Jenkins, GitLab CI/CD, ArgoCD, FluxCD, Git, GitLab, Bitbucket
- **Monitoring, APM & Logging:** OpenTelemetry, Prometheus, VictoriaMetrics, ClickHouse, Grafana, AlertManager, Pinpoint, Dynatrace, AppDynamics, ELK Stack, Loki
- **Messaging & Queueing:** Kafka, RabbitMQ, SNS

- **Programming:** Go, Python (Flask, Django), JavaScript (React), Bash, HTML
- **Databases:** Amazon RDS, PostgreSQL, MySQL, MongoDB, Redis, Google Cloud SQL, DynamoDB, InfluxDB
- **OS:** Linux (CentOS, Ubuntu, Debian), Windows
- **Security & Compliance:** IAM, AWS KMS, Secrets Manager, GuardDuty, CloudTrail, WAF, Shield, SonarQube, Qualys, Cortex
- **Artifact Repositories & API:** Docker Hub, ECR, GCR, Nexus; AWS API Gateway, Kong

WORK EXPERIENCE

Lead Cloud Engineer | Sprinklr India Pvt Ltd
Sep 2024 – Present | Gurgaon, India
Key Result Areas:

- Lead & mentor a 6–10 member DevOps & Cloud Engineering team, providing technical direction, conducting code reviews, supporting hiring & driving end-to-end delivery of the internal DevOps/AIOps platform while aligning engineering execution with organizational priorities.
- Architected and developed Cosmic, a Go-based internal MCP (Model Context Protocol) gateway, federating 21+ infrastructure integrations including AWS, Kubernetes, Prometheus, PagerDuty, Jenkins, Graylog, VoIP, InfluxDB, and Elasticsearch through a centralized RBAC-governed endpoint, enabling controlled infrastructure access for AI assistants such as Claude and Cursor.
- Enabled AI-driven self-service infrastructure operations by exposing AWS cost & usage intelligence alongside production incident triage, diagnosis & remediation capabilities through natural-language interfaces, helping engineers reduce manual operational toil & accelerate MTTR.
- Designed and delivered a Go-based workflow automation engine featuring an LLM-assisted workflow builder, multi-step operational orchestration, human approval mechanisms, scheduling, credential management, and version history, establishing a scalable foundation for automated DevOps and SRE processes.
- Engineered AI agents for incident triage, infrastructure health checks & CAB (Change Advisory Board) meeting scheduling, extending the platform beyond monitoring into intelligent operational automation & reducing repetitive SRE/DevOps activities through workflow execution.
- Built internal engineering platforms including Prism, Chronos, and Astrosync—covering multi-cluster Kubernetes visibility and troubleshooting, centralized alerting and observability, and scheduled OS/package patching with safe rollback.
- Deployed and operated VictoriaMetrics across 90+ Kubernetes clusters, establishing scalable, high-cardinality metrics storage with long-term retention while improving observability scalability and lowering the operational cost associated with large-scale monitoring.
- Implemented progressive delivery using Argo Rollouts, introducing canary and blue-green deployment strategies with automated analysis and instant rollback capabilities to reduce release risk and support zero-downtime application delivery across multiple environments.
- Automated AWS infrastructure provisioning through Terraform & managed self-hosted EKS clusters across production & lower environments, while improving infrastructure through Graviton-based nodes, spot instances & autoscaling strategies for production workloads.
- Engineered a high-throughput telemetry ingestion pipeline on OpenTelemetry & Kafka, storing logs & traces in ClickHouse and metrics in VictoriaMetrics, designed to be horizontally scalable, fault-tolerant & highly available.
- Deployed and operated self-hosted ClickHouse on Kubernetes, tuning the columnar store for high-throughput log & trace ingestion and fast query performance.
- Autoscaled ingestion workloads with KEDA based on Kafka consumer lag, absorbing traffic spikes automatically and eliminating chronic over-provisioning.
- Built reusable Terraform & Terragrunt modules enabling consistent, repeatable deployment of the infrastructure stack across AWS, GCP & Azure.
- Automated complex, multi-step operational & data pipelines with Argo Workflows, eliminating manual toil.
- Drove a 13% reduction in cloud spend across AWS, GCP & Azure through right-sizing, workload optimization, and storage optimization with zstd compression & lifecycle policies.
- Introduced chaos engineering using Litmus Chaos with CI/CD integration, running experiments across node failures, pod evictions & network faults to validate platform resilience before releases.

DevOps Lead Engineer | One97 Communications Ltd (Paytm)
Apr 2022 – Sep 2024 | Noida, India
Key Result Areas:

- Led cross-functional DevOps & cloud initiatives, combining technical leadership, project management, stakeholder coordination & delivery governance to achieve a 20% reduction in project completion time while maintaining alignment across engineering & business teams.
- Directed the migration of 50+ microservices from Ali Cloud to AWS, architecting cloud-native deployment on Kubernetes/EKS and strengthening scalability, operational efficiency, and infrastructure economics while delivering a 25% reduction in operational costs.
- Designed and developed a Release Engineering UI to streamline deployment and release-management activities, increasing engineering productivity while delivering a 30% reduction in manual operational tasks.
- Implemented APM and application monitoring with error-triggered alerting, strengthening production observability and proactive incident detection while contributing to 99% infrastructure uptime.
- Designed and deployed a Kubernetes Operator using Custom Resource Definitions (CRDs) to automate HPA patching, improving autoscaling responsiveness and enabling more efficient resource utilization across Kubernetes workloads.
- Integrated AI-powered anomaly detection into monitoring systems, enabling earlier identification of abnormal infrastructure/application behavior and contributing to a 15% reduction in critical incidents.

Senior Software Engineer (SRE) | Bharti Airtel

Aug 2021 – Apr 2022 | Gurgaon, India

Key Result Areas:

- Performed capacity planning and infrastructure scaling analysis to align resource provisioning with workload requirements, achieving a 20% reduction in infrastructure costs while maintaining operational scalability.
- Automated deployment processes for 15+ microservices, standardizing application delivery and reducing deployment execution time by 25%, thereby improving release velocity and operational consistency.
- Optimized cloud infrastructure through resource allocation and automation, improving overall resource utilization by 30% while supporting cost-efficient scaling of production workloads.
- Owned production and development system availability, implementing reliability-focused operational practices that supported 99.9% uptime across critical environments.

Site Reliability Engineer | PayU Payments Private Limited
Aug 2018 – Aug 2021 | Gurgaon, India

Key Result Areas:

- Developed a customized DevOps UI with role-based authentication, creating a centralized operational interface that improved usability while strengthening controlled access to engineering and infrastructure capabilities.
- Managed compliance and non-compliance servers, vendor VPN connectivity, and critical systems, supporting operational governance and availability of business-critical infrastructure within a payments environment.
- Introduced GitLab CI/CD to modernize application delivery, improving deployment automation and reducing dependency on manual release processes while establishing a more consistent engineering workflow.

KEY PROJECTS

Cosmic — Internal AIOps & MCP Gateway Platform

Key Result Areas:

- Architected a Go-based MCP gateway connecting 21+ infrastructure integrations and 100+ cluster environments through a centralized RBAC-governed endpoint for AI assistants including Claude and Cursor.
- Integrated an LLM-assisted workflow engine, AI agents, and internal platform interfaces spanning Prism for multi-cluster Kubernetes management, Chronos for observability and alerting, and Astrosync for patch management.
- Enabled AI-assisted infrastructure interaction, operational workflows, incident management, and platform self-service through a unified engineering ecosystem.

DevOps Custom UI

Key Result Areas:

- Built a role-based DevOps portal covering compliance management, vendor VPN operations, AWS monitoring across EC2, RDS, and ELB, infrastructure approval workflows, and security-group/user audit history.
- Delivered approximately 70% reduction in manual effort by centralizing operational processes and automating repetitive infrastructure-management activities.

2FA Integration with Firewall for Vendor Control

Key Result Areas:

- Implemented two-factor authentication (2FA) for vendor access with role-based permissions, strengthening access governance while streamlining controlled vendor onboarding and connectivity.

Business Metrics Customized Dashboard

Key Result Areas:

- Developed a Grafana + Prometheus business-metrics dashboard with automated alerting for critical indicators, improving operational visibility and contributing to a 50% improvement in incident response efficiency.

PG2 Migration — Ali Cloud to AWS

Key Result Areas:

- Executed infrastructure migration from Ali Cloud to AWS, deploying microservices on EKS with comprehensive monitoring to improve scalability, performance, operational efficiency, and cost effectiveness.
